

QGIS Application - Feature request #680  
add geographic columns to PostGIS

<b>Description</b>  It would be good to have a button for adding geographic columns to a postgres table, respecting OGC standard (thus updating also geometry_columns). To add an alphanumeric column, qgis must send to database 'ALTER TABLE tablename ADD COLUMN columnname typecolumn;', whereas to add a geometry it should send instead 'SELECT ADDGEOMETRYCOLUMN (<schema_name>, <table_name>, <column_name>, <srid>, <type>, <dimension>). Furthermore, it would be good to have a "delete column" button.

Hi!

Postgis Manager is the answer. Closing this ticket.
