| Crashes QGIS or corrupts data: | Copied to github as #: 10745 |

Description

When using the vector editing tools, after a right-click the edit attribute window appears. It was working fine - but kept on creeping up the main window after each right click. Eventually it disappeared off the top of the window and now I cannot get it back. This means that I cannot now use the vector editing tools - as I cannot enter any attributes in.
