Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: wontfix
Crashes QGIS or corrupts data:	Copied to github as #: 10750

Description

I have created a text file with coordinate points for certain landmarks in the city of Boston. This text file has three comma-delimited columns denoting X, Y, and the name of the location. When I attempt to use the "add delimited text" plugin to add them to QGIS, I get a crash report message from microsoft (I'm running XP) and QGIS shuts down.

I have tried setting the projection information or not, importing my basemap (a tiff file from [[MassGIS]]) first or not, turning on "on the fly" projection or not, and nothing seems to affect the problem. Any assistance would be much appreciated.
