

SLD Description

Status:	Closed
----------------	--------

Assignee:

Affected QGIS version:1.8.0

Operating System:

Pull Request or Patch supplied:

Crashes QGIS or corrupts data:

Regression?:	No
--------------	----

Easy fix?:	No
------------	----

Resolution:	invalid
--------------------	---------

Copied to github as #: 16080

When exporting a style, QGIS does so with a "Description" that is basically the layer name, thus:

<se:Rule>

<se:Name>Boulders</se:Name>

<se:Description>Boulders</se:Description>

<ogc:Filter>

I believe this is invalid.

(a) It fails the GeoServer validation with error:

Element 'Description' cannot have character [children], because the type's content type is element-only

Which is consistent with:

(b) SLD spec examples show that description as:

<se:Description>

```
<se:Name>GS1</se:Name>
```

<se:Title>GeoSym</se:Title>

</se:Description>

So Description itself probably shouldn't have the description text but should contain elements.

- Resolution set to invalid

- Status changed from Open to Closed

It was already fixed in master branch many months ago. Unfortunately there will be no QGIS 1.8.1, so you have to wait until 2.0 is released or use the development version.
