

QGIS Application - Feature request #6986

Browser should support formats with multiple layers in it

2013-01-13 04:41 AM - Giovanni Manghi

Status:	Closed	Resolution: fixed/implemented Copied to github as #: 16091
Priority:	High	
Assignee:		
Category:	Browser	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>When you add the normal way file formats like GPX or personal geodatabase (samples attached), qgis pops up a dialog to allow choose what layer(s) inside that file the user wants to load.</p> <p>Actually using the browsers this formats is seen just as a single layer, and so the user cannot control what layer to load.</p>		

History

- #1 - 2013-06-02 07:57 AM - Giovanni Manghi
- Tracker changed from Bug report to Feature request
- #2 - 2013-08-23 08:48 AM - Paolo Cavallini
