Description

I'm using Quantum GIS version 1.8.0-Lisboa and trying to create intersection point using Intersection tool. (Vector -> Analysis tools -> Line Intersections)

I'm using Ubuntu Linux, version 12.04.

But when I do that for my shapefile, It pops up the following error in the dialog box:

An error has ocurred while executing Python code:

It didn't work for me for any of the shapefiles I tried. Anyway, I have attached a simple shapefile which produces the same error for me.

Thanks!

Thanks!

the tool seems to work only with two different input layers, anyway it should not give a python error or it should also work within the same layer.
