Operating System:		Easy fix?:	No	
Pull Request or Patch supplied:		Resolution:		
Crashes QGIS or corru <b>pits</b> data:		Copied to github as #: 16120		
Description				

The /UI/Customization/enabled flag is referenced in Quantum-GIS/src/app/qgscustomization.cpp which means --customizationfile is ignored if passed via the command line and the QGIS settings don't have /UI/Customization/enabled set to true.

--customizationfile should override this to enable customization
