

QGIS Application - Bug report #7037
WMS Server Search returns Network Error 301

2013-01-23 03:02 PM - Martin Jung

Status:	Closed	
Priority:	Low	
Assignee:		
Category:	Web Services clients/WMS	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 16127
Description		
<p>Well, the subject says it all.</p> <p>Can be reproduced by clicking on WMS -> Tab Server Search and search for something.</p> <p>Don't know if it is just temporary or a constant bug. It worked some time ago though.</p> <p>Maybe a little fix would be to give the user more information in the footer such as <i>Server unavailable</i> or so.</p>		

History

#1 - 2013-01-24 02:15 AM - Giovanni Manghi

- Operating System deleted (Linux Debian)

it does not seems a qgis proble, but a service one

<http://geopole.org/wms/search?search=%1&type=rss>

"Error 503 Service Unavailable"

#2 - 2015-09-15 07:55 AM - Nino Formica

Problem still persist: Network error 203.

The geopole search WMS service is always down.

Suggestion: simply remove "search WMS" function

#3 - 2017-05-01 01:09 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#4 - 2018-02-24 09:55 PM - Nino Formica

Problem solved. Service <http://geopole.org/wms/search?search=%1&type=rss> it's ok !

Then QGIS "WMS Server Search" works well

#5 - 2018-02-25 08:56 AM - Paolo Cavallini

- Resolution set to fixed/implemented

- Status changed from Open to Closed

- Description updated
