Pull Request or Patch supplied:	No	**Resolution:**	fixed
Easy fix?:	No	**Copied to github as #:**	16130

Description

If you import a shapefile into PostGIS using the QGIS browser, the resulting vector has the geometry column wrongly called "qgs_geometry". It should be just "geom".

Associated revisions

Revision 2a542487 - 2013-01-24 05:39 PM - Jürgen Fischer

use 'geom' as default name for geometry columns in browser data items (implements #7042)

- Tracker changed from Bug report to Feature request

- Priority changed from High to Normal

Why "geom"? Isn't the name of the geometry column just a matter of taste?

#2 - 2013-01-24 06:37 AM - Jürgen Fischer

- Subject changed from PostGIS column worngly named "qgs_geometry" to PostGIS column wrongly named "qgs_geometry"

#3 - 2013-01-24 06:40 AM - Sandro Santilli

Agreed, matter of taste. Which is also why I want the geometry column name in the layer name ...

#4 - 2013-01-24 07:43 AM - Paolo Cavallini

It is a matter of taste, but the current situation is utterly confusing for the users:

  - when dropping from browser to DB manager>geom

  - when dropping from browser to browser>qgs_geometry

#5 - 2013-01-24 07:48 AM - Sandro Santilli

It would surely be nice to encode own's taste into a central qgis configuration

#6 - 2013-01-24 08:34 AM - Jürgen Fischer

- Resolution set to fixed

- Status changed from Open to Closed

implemented in commit:2a542487cf.
