Description

Hi,

I tried new provider with revision 74ace4a. I have some issues comparing to postgres provider:

1- I just can't select a classical attribute table to add it in project. I can define queries, fetch values and test queries correctly. I can't select and id column, ther is no drop down menu coming

2- oracle has no spatial ability declared, but every attribute table appears also as geometric. Qgis asks to define manually geometric type.. Is ther any way to define them only as attribute tables?

Thanks (great work Jurgen!)
