QGIS Application - Feature request #7081
Command line option to read project but not actually loading the layers

Easy fix?:	No	**Copied to github as #:**	16165

Description

When a problem occurs in a complex project, it is hard to
find out the culprit layer(s) with a simple editor.
A command line option could exist that would read the
layers to the Layers (aka TOC) panel but actually only
load the layer when right click load. In this way, it would be
much easier identifying the problematic layer(s) and remove
it/them from the project.
