Pull Request or Patch supplied:		**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:		**Copied to github as #:**	16174	

Description

Curved labels ignore "Always show upside-down labels".

See curved line without label at the center of the attached screenshot.

Options used for labeling:

- Placement curved
- Above line
- Line orientation dependent position
- Always show upside-down labels
- Maximum angle between curved characters: inside=60 outside=95
- Show all labels for this layer

Notice on the screenshot, the combined effects of this bug and bug #5778. So for a straight line from SE to NW (like left "Le Buëch"), the label is drawned but not on the right side of the line.

History

#1 - 2013-02-08 06:40 PM - Larry Shaffer

- OS version changed from W7 to Any

- Status changed from Open to Feedback

- Target version set to Future Release - Nice to have

- Operating System changed from Windows to Any

Hi Laurent,

Curved labels are always drawn right-side-up (by PAL lib). So, the "Always show upside-down labels" setting should probably just be disabled when curved placement is chosen, until such time as #5778 is fixed or PAL can be updated to draw curved labels upside-down.

#2 - 2013-02-11 06:35 AM - Laurent Gasnier

Hi Larry,

Thanks for your feedback. Meanwhile, I will find a workaround.

#3 - 2014-10-11 04:37 AM - Giovanni Manghi

- Status changed from Feedback to Open

- Operating System deleted (Any)

- OS version deleted (Any)

#4 - 2016-10-10 05:41 PM - Nyall Dawson

- Resolution set to fixed/implemented

- Status changed from Open to Closed

Fixed in master
