

QGIS Application - Bug report #7144

Resampling does not work (anymore?) for WMS layers

2013-02-11 05:24 AM - Giovanni Manghi

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Rasters	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed
Crashes QGIS or corrupts data:	No	Copied to github as #: 16208
Description		
I believe it is a regression because it used to work, anyway would be a new feature that is not working as expected (because otherwise the resampling options should not be available for WMS layers).

#2 - 2013-05-15 09:37 AM - Radim Blazek

- Resolution set to fixed

Resampling was disabled for rasters without known data source resolution (WMS). I have reenabled resampling for all data sources. Note that if resolution is not known, we cannot decide if undersampling or oversampling has to be used. In such case oversampling always used (expecting that server data have always higher resolution, which is not always true).
