

QGIS Application - Bug report #7204

QGIS server (master) fails to cascade layers from Tilecache WMS servers

2013-02-21 12:46 AM - Giovanni Manghi

Status:	Closed	
Priority:	Severe/Regression	
Assignee:	Marco Hugentobler	
Category:	QGIS Server	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 16245
Description		
<p>With QGIS 1.8 I'm able to create a project with layers from a tileacache server and then serve them as normal WMS layer with QGIS server.</p> <p>In QGIS master this stopped to work.</p> <p>A server you can test is http://mapas.igeo.pt/tilecache/tilecache.py (offline) or OpenGeo WMTS</p> <p>be sure to check both the "ignore getmap..." and "ignore getfeatureinfo..." checkboxes and consider that the layers in this server are visible only starting from certain scales.</p>
