

QGIS Application - Bug report #7261

table join & save as

2013-03-02 03:08 AM - Zoltan Siki

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:		
Affected QGIS version:	1.8.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed
Crashes QGIS or corrupts data:	No	Copied to github as #: 16281
Description		
<p>Two layers/tables are joined by attributes and the two tables have columns with the same column name (not the column used to join). Saving the joined table the attribute values are lost. For example, both tables have AREA column, after joining I see two AREA columns, saving the joined table I got AREA and AREA1 columns and the content of AREA1 column lost.</p>		

History

#1 - 2013-09-22 02:05 AM - Giovanni Manghi

- Resolution set to fixed
- Status changed from Open to Closed

This has been fixed in qgis 2.0
