QGIS Application - Bug report #7381
Change colour in Layer Properties freezes system

2013-03-17 05:00 AM - John Sankey

Status:	Closed			
Priority:	High			
Assignee:				
Category:				
Affected QGIS version:	1.8.0		**Regression?:**	No
Operating System:	Mac OSX		**Easy fix?:**	No
Pull Request or Patch supplied:	No		**Resolution:**	worksforme
Crashes QGIS or corrupts data:	Yes		**Copied to github as #:**	16353

Description

Twice now (in maybe 50 successful uses), opening layer properties then changing colour has hard frozen the system. The OK button is not lit; the whole system is dead - only recovery is pulling the power plug. Unfortunately I can't remember doing anything different those two times compared to the many successful times...

History

#1 - 2014-02-07 05:54 AM - Giovanni Manghi

- Priority changed from Normal to High

#2 - 2014-02-09 12:32 AM - Martin Dobias

- Resolution set to worksforme

- Status changed from Open to Closed

Hm... a randomly occurring bug, and system dependent... could be some specific local problem. I am not sure if we can do anything about it, so closing it as not being reproducible.
