

QGIS Application - Bug report #7497

OWS server settings: The Exclude composers feature should rather read "Include composers"

2013-04-03 07:00 AM - Andreas Schmid

Status: Closed	
Priority: Normal	
Assignee: Marco Hugentobler	
Category: Web Services clients/WMS	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: end of life
Crashes QGIS or corrupts data:	Copied to github as #: 16448
Description	
The composers selected with the Exclude composers feature in the OWS server settings are rather included instead of excluded, so this feature should read "Include composers".	

History

#1 - 2013-04-03 07:23 AM - Andreas Schmid

The behavior of the Exclude composers feature is not completely consistent:

- If the check box is checked and some composers are listed, they get listed in the qgs (<WMSComposerList>) and in the GetCapabilities response. This indicates that it's rather an include composers feature.
- However, if the check box is not checked, all the available composers still appear in the GetCapabilities response (but in the qgs there is no <WMSComposerList> element present).
