

QGIS Application - Feature request #75

show postigs layer names as schema.table.column

2006-04-13 04:02 PM - Tim Sutton

Status:	Closed	
Priority:	Low	
Assignee:	Gavin Macaulay -	
Category:	Data Provider	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 10134
Description		
<p>(Requested by strk from geos)</p> <p>If you add multiple layers from different schemas with the same layer names there is no easy way to differentiate between them. Also tables can have multiple geometry cols so it would be useful to show col name too.</p>		

History

This could make the layer text quite long, and for most people the table name is sufficient.

How about a tooltip that has the full schema.table.column?

Or a global qgis option to use full database paths or just table names?

#2 - 2006-04-22 02:10 PM - Gavin Macaulay -

- Resolution set to fixed
- Status changed from Open to Closed

The tooltip option in is SVN
