Description

It would be great to have auto indentation after ':' signs.

For example, the below snippet would fail.

```
lst = ['a','b','c','d']
for i in lst:
print i
  File "<input>", line 2
    print i
      ^
IndentationError: expected an indented block
```

To make it work, we need to add required spaces to indent the lines after the ':' sign

```
lst = ['a','b','c','d']
for i in lst:
    print i
a
b
c
d
```
