<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 16563
<b>Description</b>		
<p>If you connect to a WMS service which serves it's layers in just one Image encoding, which is NOT image/png, there will be no Image encoding enabled when you click on one of the layers.</p> <p>test: <a href="http://geodata1.nationaalgeoregister.nl/luchtfoto/wms">http://geodata1.nationaalgeoregister.nl/luchtfoto/wms</a></p> <p>this service only serves as image/jpeg. Clicking on the available layer, the JPEG radio is not enabled (actually nothing is enabled). Now when you Add a layer, there is actually an error because QGIS requests images in image/png.</p> <p>(fix will be attached)</p>
