Crashes QGIS or corrupts data:	No	**Copied to github as #:**	16563

Description

If you connect to a WMS service which serves it's layers in just one Image encoding, which is NOT image/png, there will be no Image encoding enabled when you click on one of the layers.

test: http://geodata1.nationaalgeoregister.nl/luchtfoto/wms

this service only serves as image/jpeg. Clicking on the available layer, the JPEG radio is not enabled (actually nothing is enabled). Now when you Add a layer, there is actually an error because QGIS requests images in image/png.

(fix will be attached)
