

QGIS Application - Feature request #7662

Sensible default width and precision for real columns

2013-04-20 01:56 AM - Nathanael Boehm

Status:	Open	Resolution: Copied to github as #: 16581
Priority:	Low	
Assignee:		
Category:	GUI	
Pull Request or Patch supplied:	Not supplied	
Easy fix?:	No	
Description		
<p>In current dev 1.9 the default values for Width and Precision when adding a column to a table are 1 and 0 respectively for decimal/real type. It's unlikely that people would use real numbers and use this configuration, so I propose changing the defaults to perhaps Width=10 and Precision=5.</p> <p>This was discovered when I was adding columns so I could manually move labels and wondered why my labels where disappearing when I saved the layer ... to discover they had jumped to near Africa because my coordinates were being saved as 1,0 instead of 149.1178,-35.7456.</p>
