

QGIS Application - Bug report #7712

qgis server master does not work on Windows(?)

2013-04-25 03:27 PM - Giovanni Manghi

Status: Closed	
Priority: Normal	
Assignee:	
Category: QGIS Server	
Affected QGIS version: master	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: worksforme
Crashes QGIS or corrupts data: No	Copied to github as #: 16623
Description	
<p>With osgeo4w/qgis master it is also shipped qgis server. By editing https_qgis.conf and httpd.conf it is easy to make it work instead of qgis server 1.8.</p> <p>While qgis server 1.8 works, qgis server master does not.</p> <p>The url I tested is like</p> <p>http://localhost/cgi-bin/qgis_mapserv.fcgi?map=c:/temp/teste20.qgs</p> <p>in the wms client the layer list is not presented and it just shown the project name. Trying force add this "layer" I get</p> <pre>WMS provider: Cannot calculate extent (d:\src\qgis\src\providers\wms\qgswwmsprovider.cpp : 126 : QgsWmsProvider::QgsWmsProvider) Raster layer: Provider is not valid (provider: wms, URI: IgnoreGetFeatureInfoUrl=1&IgnoreGetMapUrl=1&crs=EPSG:3763&featureCount=10&format=image/jpeg&layers=teste20&styles=&url=http://localhost/cgi-bin/qgis_mapserv.fcgi?map%3Dc:/temp/teste20.qgs (d:\src\qgis\src\core\ aster\qgsrasterlayer.cpp : 826 : QgsRasterLayer::setDataProvider)</pre>
