

QGIS Application - Bug report #7743

Vector layer join broken if not using cached join

2013-05-01 11:11 AM - Chris Crook

Status:	Closed	
Priority:	High	
Assignee:	Chris Crook	
Category:	Vectors	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	Yes	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 16648
Description		
<p>I noticed a couple of errors in the implementation of the Vector layer join which means it may display incorrect data when not using a memory cache.</p> <p>1) If the joined layer already has a subset string, then the layer is joined by added ' AND name=value' to the original. To be safe the original subset string should be parenthesised</p> <p>2) The implementation of 'AND name=value' is wrong - the value is enclosed in double quotes rather than apostrophes.</p>

- Status changed from Open to Feedback

Hi, can someone commit the patch so we can test? cheers!

#4 - 2013-06-03 11:12 AM - Chris Crook

Hi Giovanni

I couldn't commit this when I submitted it (though I could now). But probably should be left to someone else, as not really in my area (delimited text provider).

right now there a a **lot** of patches on github needing to be reviewed and eventually applied. Most of them fixing bugs. Better to insist in the dev mailing list.

#7 - 2013-07-17 04:15 AM - Jürgen Fischer

- *Status changed from Feedback to Closed*

Fixed in changeset commit:"c04a130a990d60a70696da76f6eedac135b72f12".
