

QGIS Application - Bug report #7763

Black raster when a special character is used in file path

2013-05-03 08:04 AM - Romain Blanc

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Rasters	
Affected QGIS version:	1.8.0	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 16662
Description		
<p>Hello world,</p> <p>I've noticed that QGIS 1.8 has a problem when special characters are used in the path of a file that is loaded as raster layer.</p> <p>For example, when I add a new raster layer (ECW file...) that is in C:/donn*+é+*es/file.ecw, it appears all black in QGIS. But when I import the same file from an other path without special characters, like C:/donnees/file.ecw, it appears properly.</p> <p>Yes, I can also change the name of my file paths ;-) But when you have to work with a server that's not yours...</p>

can you test QGIS master, please? thanks!

#2 - 2013-05-05 11:06 PM - Romain Blanc

I've tested QGIS Master (1959182) and I can't open any ECW file -> PE_1123-44.ecw is not a supported raster data source

Thanks for your help! ;-)

Hello ;)

I'm sorry, I'm a bit late...

Thank you Giovanni Manghi for the link, I've followed the steps and I can now open ECW files from a path without special characters.

But I've tried many times in QGIS 1.9.0-17 -18 -19 -20 to import an ECW file from a path with special characters. No, it don't work anyway -> "data.ecw is not a supported raster data source". I precise I can easily open the same file when it's in a path without spec chars.

Thank you!

Thank you!

on Windows 7/8 there are no issues on any path that contains characters like ç ã é á è spaces etc.

if this is a XP only problem than I suggest to close this ticket.

So, I'll update my Windows XP to Win7 ;-)

Or try Ubuntu!

Thanks a lot for your help!
