

QGIS Application - Bug report #7780

Incorrect number of rows when testing layer filter expression

2013-05-08 04:16 AM - Alexandre Neto

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	GUI		
Affected QGIS version:	master	Regression?:	No
Operating System:		Easy fix?:	No
Pull Request or Patch supplied:		Resolution:	worksforme
Crashes QGIS or corrupts data:		Copied to github as #:	16675
<b>Description</b>			
<p>When one tests the layer filter expression, the number of rows showed is the total number of row in the layer instead of the result of the filter.</p> <p>The filter works well.</p> <p>Does not happen in 1.8, it's a regression, so I set it as a blocker.</p>

History

#1 - 2013-05-13 06:01 AM - Matthias Kuhn

- Priority changed from Severe/Regression to Normal

From qgspostgresprovider.cpp (Line 2315):

```
// use estimated metadata even when there is a where clause,  
// although we get an incorrect feature count for the subset  
// - but make huge dataset usable.  
  
if ( !mIsQuery && mUseEstimatedMetadata )
```

The currently supported solution is to disable "Use estimated metadata" for your database connection.

If you see a better way of managing this issue, please share your ideas. I have changed the priority to *Normal* since this is expected behavior (although admittedly odd)

#2 - 2014-01-27 01:57 AM - Alexandre Neto

I would not mind passing this issue to "Feature". And if there is no better solution, we could inform the user that he estimated metadata was used and therefore the showed values might not be accurate.

#3 - 2014-01-27 02:01 AM - Paolo Cavallini

- Subject changed from *Incorrect number o rows when testing layer filter expression* to *Incorrect number of rows when testing layer filter expression*

**#4 - 2014-01-30 11:41 PM - Paolo Cavallini**

- Target version changed from *Version 2.0.0* to *Future Release* - High Priority

**#5 - 2014-03-25 08:59 AM - Sandro Santilli**

I was also bitten by this problem, still in 2.0 and in 2.2.

Being a regression from 1.8 I don't see how it becomes a feature request.

Another thing I don't see is why mlsQuery should disable estimation while filter should not, they both basically introduce a filtering, so should be both threatred the same way, IMHO (ie: disabling the estimation)

**#6 - 2017-05-01 01:09 AM - Giovanni Manghi**

- Regression? set to No

- Easy fix? set to No

**#7 - 2017-05-02 12:18 PM - Alexandre Neto**

As far I understand, the "Use Estimated metadata" is not used by default. I can't remember if that was the case back then... anyway, I would close this ticket, the behavior is fully documented in here:

[http://docs.qgis.org/2.18/en/docs/user\\_manual/working\\_with\\_vector/supported\\_data.html#creating-a-stored-connection](http://docs.qgis.org/2.18/en/docs/user_manual/working_with_vector/supported_data.html#creating-a-stored-connection)

**#8 - 2017-05-02 02:42 PM - Jürgen Fischer**

- Resolution set to *worksforme*

- Description updated

- Status changed from *Open* to *Closed*
