

QGIS Application - Bug report #7958

Crash when switch off a WMS layer while you edit a vectorlayer

2013-05-31 05:22 AM - Victor Axbom

Status: Closed	
Priority: High	
Assignee:	
Category: Digitising	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: duplicate
Crashes QGIS or corrupts data: Yes	Copied to github as #: 16817
Description	
To reproduce this crash: Add two layers, a vector layer and a wms layer. Set the vector layer in edit mode and use the node tool to select nodes in a polygon/line. Without switching off the edit mode or node tool, click the checkbox of the wms layer to hide it. Now try to move nodes in the vector layer without selecting the layer first. Qgis will crash because the layer isn't selected but the node tool is still active.

this happens really on master on on qgis 1.8?

#2 - 2013-05-31 07:29 AM - Victor Axbom

It happens both on master and 1.8

are you using a recent revision of qgis master? I have the feeling that this bug was already fixed, but now I'm not sure anymore.

Confirmed on Win 7 and Linux. I would like to tag this as blocker, but as per 1.8 is not a regression. Someone can test 1.7.4 or earlier?

A couple of days old so if it hasn't been fixed in the last days it's seems to still be in there. But maybe it behaves different on other platforms? Im using win xp

I tested the latest master and I confirm it.
