<b>Description</b>		
Loading a table, one has always to select a SRID (if not defined correctly in the table). This is rather cumbersome, so: <ul style="list-style-type: none"><li>- wouldn't it be better to remember the SRID used for each table?</li><li>- it would be better to put the last used SRID as a default for new tables</li></ul>

- Description updated

I assume still valid on QGIS 3; unable to check, as I no longer have Oracle available.
