Hi Giovanni,  
please could you provide any stacktrace for the crash ?

might this be related to #8102 ?

here on exit it only crashes with the stacktrace of #8102.

I don't know if it is the same issue. I still see it, and it does not happen if the same postgis layer is added using the "add postgis layer" dialog instead.

I am unable to debug the crash to provide additional info because  
I am getting the #8102 crash, but my colleague gets the crash on Windows.  
thus I don't know if this may only be related to Windows OS.

- Status changed from Open to Feedback

#8102 is "fixed" (Python GC is not run on exit for older affected SIP versions)  
Can you check if this issue is also solved or if needs further investigation.

- *Resolution set to fixed*
- *Status changed from Feedback to Closed*

I cannot replicate the issue anymore, so seems really fixed! thanks!
