

## QGIS Application - Bug report #8205

### Selected rows in attribute table have wrong/too light background color

2013-07-01 08:22 AM - Andreas Neumann

<b>Description</b>	
<p>On QGIS master in Windows I have the issue that the selected rows (when I select the features in the map) in the table are not salient enough. They appear with a very similar light gray background as every odd row. This means I cannot easily distinguish an odd row from a selected row. See this screenshot here: <a href="http://webgis.uster.ch/temp/selected_rows_picked_from_map.png">http://webgis.uster.ch/temp/selected_rows_picked_from_map.png</a></p> <p>This is only an issue with the Windows version, not on Ubuntu/KDE, where these selected rows appear in light blue.</p> <p>When one scrolls in the table, the selected rows turn into blue.</p>

It seems that the colors change, when the (attribute table) window get or loses focus. It therefore is not a QGIS issue, but rather a windows (or Qt) color-theme issue. Go to e.g. the layer properties => fields and select a row in the table. If you give the focus to another window the selection color will also turn gray.

Definitely not a problem from our kitchen, so I'll close this.

If a workaround for this should be implemented (e.g. override default color palette on windows) this should be reopened as a feature request.

This is too bad.

It really is a problem in day to day work. It is the part of the core of the GIS work to have table and map side by side and browse in the map and table and

see where things are located and what values they have.

Is there nothing we can do? E.g. set the background style/color even if the window with the table does not have the focus?

Can a windows user give a try to <https://github.com/qgis/QGIS/pull/1069>

I was coding it pretty much in the dark

**#5 - 2014-01-13 04:58 AM - Andreas Neumann**

Sorry - I don't have a dev environment on Windows. If you put it into master I could test it with the next nightly tomorrow.

Thanks,

Andreas
