

QGIS Application - Bug report #8318

data-defined size for polygon's centroid fill symbology broken

2013-07-17 07:09 PM - Mathieu Pellerin - nIRV

Status: Closed	
Priority: Severe/Regression	
Assignee:	
Category: Symbology	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 17111
Description	
<p>The data-definition feature for the centroid fill is currently broken in a few ways:</p> <ol style="list-style-type: none">1. Setting the size through data-defined '10' expression will result in a different centroid marker size than a fixed 10 mm size (i.e. not relying on data-definition)2. Using a field (either via drop-down or in an expression) to set up data-defined size for centroid fill marker results in a marker with size 0, disregarding the field's value. <p>The attached project showcase the above problems. I'm setting this as a blocker per the "newly introduced feature not working properly" blocker definition.</p>
