

QGIS Application - Bug report #8406

WMTS Connection is not working

2013-08-02 02:35 PM - Bob Bruce

Status: Closed	
Priority: Normal	
Assignee: Jürgen Fischer	
Category: Web Services clients/WMS	
Affected QGIS version: 1.8.0	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: worksforme
Crashes QGIS or corrupts data: No	Copied to github as #: 17178

Description

I have not been able to get a WMTS server to work with either the stable version of QGIS 1.8.0 or the current development version of 1.9

This is the WMTS connection :

http://nis.cubewerx.com/cubewerx/cubeserv?CONFIG=OIM_MB_-_Orthophoto-WMTS

which is an OGC compliant WMTS server.

(the GetCapabilities request is at:

http://nis.cubewerx.com/cubewerx/cubeserv?CONFIG=OIM_MB_-_Orthophoto-WMTS&SERVICE=WMTS&REQUEST=GetCapabilities)

this is part of our NIS pilot project and will be available for another 3 months.

I am able to get this WMTS server to work with OpenLayers though through a web page that I have created. This page is attached to this bug report.

Do you know how QGIS detects that this is a WMTS connection since we are using the WMS connection dialog? I am seeing error messages that keep saying that a WMS connection could not be established, is that because the error message is currently not specific to the type of connection (WMS or WMTS) or because it didn't try and make a WMTS connection?

- Status changed from Open to Feedback

not reproducible here. Specifying

http://nis.cubewerx.com/cubewerx/cubeserv?CONFIG=OIM_MB_-_Orthophoto-WMTS&SERVICE=WMTS&REQUEST=GetCapabilities as URL works fine for me in master.

#2 - 2013-08-03 02:10 AM - Giovanni Manghi

it works fine here too.

#3 - 2013-08-05 04:40 AM - Jonathan Moules

#8401 - same thing? I've not tried with that WMTS (my QGIS can't access the internet) but QGIS fails for me on my internal WMTS.

Are you also leaving out ?SERVICE=WMTS&REQUEST=GetCapabilities?

Works fine here too.

Hi,

Testing WMTS with authentication leads to crash here, if authentication fails. Did someone try it?

#7 - 2013-08-05 10:20 AM - Bob Bruce

Thanks everybody for your help with this.

Today I (finally) managed to get my QGIS master copy updated. I tried this connection with the additional strings &SERVICE=WMTS&Request=GetCapabilities and it worked. So I'm closing this bug report.

Tomorrow I will add a comment to the listserv message to let everyone know that they have to add those strings.

As an additional note: when I get the properties of the layer in QGIS and go to Metadata and go to server properties it shows the label *WMS Version* rather than **WMTS Version**.

I've closed the ticket

#9 - 2013-08-05 10:21 AM - Giovanni Manghi

- Resolution set to worksforme

#10 - 2013-08-08 01:39 AM - Jonathan Moules

I'm not sure this should have been closed.

Consider it from a users perspective - They wouldn't expect to add SERVER and GetCapabilities. Myself I expect QGIS to either:

a) Figure it out automatically.

or

b) Have a separate button for WMTS.

It shouldn't silently fail as it does now. Documenting this limitation won't fix it - you'll still get lots of confused people and posts to the mailing list.

Especially as you don't require those parameters for WMS.
