QGIS Application - Bug report #8429
WMS requests for maps that were never asked for.

2013-08-08 04:14 AM - Jonathan Moules

Status:	Closed			
Priority:	Normal

Pull Request or Patch supplied:		**Resolution:**	worksforme	
Crashes QGIS or corrupts data:		**Copied to github as #:**	17198	

Description

While testing the transparency/WMS bug, I looked in the logs for the WMS.
For some reason during this period of changing transparency, QGIS had requested a couple of small, 120*120 maps that are very zoomed out - so kind of like overview maps. I don't have an overview map in QGIS; I didn't even know that was possible.

I've attached the section of log files. The two anomalous requests are for height=120.

History

#1 - 2013-09-06 03:51 AM - Goyo D

I think this may be for the legend icon.

#2 - 2013-09-09 02:19 AM - Jonathan Moules

These requests are GetMap requests, a legend is a GetLegendGraphic.

#3 - 2014-06-21 12:21 PM - Jürgen Fischer

- Resolution set to worksforme
- Status changed from Open to Closed

Not really. Those are probably requests to build the preview image that are shown in the legend/layer tree (maybe with reprojection applied). You can disable that with *Create raster icons (may be slow)* on the *canvas & legend* page in the options.
