

QGIS Application - Feature request #8470

No position indicator when you add a new point with snapping

2013-08-14 03:42 PM - Ilya Filippov

Status:	Closed	Resolution: invalid Copied to github as #: 17238
Priority:	Normal	
Assignee:		
Category:	Digitising	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>When you edit a line or polygon layer with the function of snapping, QGIS visualizes the possible location (position indicator) of snapped node of line or polygon. When you edit a point layer, when we are putting the mouse to the place where there should be a new point, the indicator of the potential position of the point does not appear and this is not clear, where the snapped point would be.</p>		

History
