Description

Zoom map to the selected row from attributes table when double click on the row number (left margin).

This is really a feature that I miss when I used to work with ArcGIS.

You that there is the zoom to selected button in the table?

Is there much difference?

#2 - 2013-09-04 06:58 AM - Rémi Bovard

Yes I know, of course. I think it's a matter of habit.

But we often select a feature by clicking on the margin, so if we can zoom on it without moving the cursor (only double click), it will be nice.
