

QGIS Application - Bug report #8587

Show/Hide labels command doesn't work any more

2013-09-09 01:43 AM - Alessandro Ciali

Status:	Closed	
Priority:	Normal	
Assignee:	Larry Shaffer	
Category:	Labelling	
Affected QGIS version:	master	Regression?: No
Operating System:	windows	Easy fix?: No
Pull Request or Patch applied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 17329
Description		
Selecting Show/Hide label tool and clicking on a labeled feature results in no change and the following message log under Qt:		
QUndoStack::endMacro(): no matching beginMacro()		
the only way to hide the label is from change label menu

Works fine here, tested on master on both Linux and Windows. Can you attach sample data?

Hi Alessandro,

I can not verify on Mac either. However, I was able to reproduce the logging of the 'QUndoStack::endMacro()...' message.

Please hover over the tool and read the tool tip. The tool's behavior is toggled by whether the Shift key is modifying the tool's click/marquee. If the label is already being shown, and you try to show it again, the message shows up in the log viewer (harmless, though still a bug). The opposite, holding Shift key to hide a label that is already hidden, does not present the message.

I will look into fixing the logged message ASAP. Thanks for reporting.

Hi all,

I have to apologise about the bug I opened. Now I understand: I was clicking on the feature with Ctrl Key. Qt log convinced me that there was something wrong with the tool.

Thank you for your support.
