

QGIS Application - Feature request #8594
executeQuery on data provider

2013-09-10 10:08 PM - Nathan Woodrow

Status:	Open	Resolution: Copied to github as #: 17336
Priority:	Normal	
Assignee:		
Category:	Unknown	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>It would be handy to be able to do executeQuery which would just pass the query to the provider and return a iterator of features.</p> <p>Would allow for something like this:</p> <pre>provider = layer.dataProvider() features = provider.executeQuery("Select * FROM blah WHERE A = 100") for f in features: ...</pre> <p>This would be handy to allow to more advanced queries against a provider and letting QGIS handle all the QgsFeature creation.</p>
