<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> fixed
<b>Crashes QGIS or corrupts data:</b>	<b>Copied to github as #:</b> 10919

#### Description

QGIS is not able to reload a saved project with [[PostGIS]] layers after changing of layername when the layer comes from public schema.

1. Load a layer from [[PostGIS]] public schema. The connection string shows:

```
.... table="public."&lt;tablename&gt;" ...
```

2. change the layername with Layer Properties->General->Display Name

3. Take a look at the connection string, it shows:

```
.... table="&lt;tablename&gt;" ...  
the schema name is lost
```

4. Save the project.

5. Load the project. QGIS is not able to load the renamed layer.

This behaviour happens only with layer from public schema.

#### History

##### #1 - 2007-12-10 02:08 AM - Jürgen Fischer

You should see that when you load a project that was saved before commit:5b4e6997 (SVN r7712). The schema name is dropped, when the schema is the current schema as it's not necessary in that case. But this might be a problem when you try to load a project save post commit:5b4e6997 (SVN r7712) with an earlier revision. Does this apply in your case?

Your described scenario applies in my case. But I just tried rev. 7753 and a new created project with this rev with the same result.
