

QGIS Application - Bug report #8600

QGIS 2.0 not working with NTLM proxy

2013-09-12 12:31 AM - Jeremy Palmer

Status:	Closed	
Priority:	Severe/Regression	
Assignee:	Jürgen Fischer	
Category:	Plugin Manager	
Affected QGIS version:	master	Regression?: No
Operating System:	windows ubuntu	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 17342
Description When using the python plugin installer with QGIS 1.8 I could authenticate using our corporate NTLM proxy server by entering the following network proxy details: host, port, username, password and selecting HttpProxy. But now under QGIS this is not possible. I see that the new plugin installer was switched over the using the QgsNetworkAccessManager in this commit:4ecf3ebd0bae19f97f32bb040c9df95967135ba8 Going back and checking WFS and WMS (which use QgsNetworkAccessManager) with QGIS 1.8 I can't actually get proxy support working. So the problem must be that the QgsNetworkAccessManager is not set-up to authenticate with a NTLM proxy server. This bug should be treated as critical because it will stop a lot of corporates from using QGIS.

Hi Jeremy,

is this really a regression or it wasn't supported either on older qgis releases?

The blocker tag is reserved for regression, so if it isn't, in order to clean the bug queue for this month of bug fixing prior 2.2, I guess it would be needed to lower the priority.

Yes before the switch happened in the plugin manager NTLM worked for downloading plugins. Other core web access functionality is status quo however.

Cheers

Jeremy
