

QGIS Application - Bug report #8617

Crashes when switching layers

2013-09-16 04:14 AM - Patrick Dunford

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:		
Affected QGIS version:	master	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch applied:	No	Resolution:
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 17354
Description		
<p>Since changing to</p> <p>QGIS version 1.9.0-Master QGIS code revision ab6a232</p> <p>Compiled against Qt 4.7.1 Running against Qt 4.7.1</p> <p>Compiled against GDAL/OGR 1.9.2 Running against GDAL/OGR 1.9.2</p> <p>GEOS Version 3.3.8 PostgreSQL Client Version 8.3.10</p> <p>Spatialite Version 3.0.1 QWT Version 5.2.1</p> <p>PROJ.4 Version 480 QScintilla2 Version 2.6.2</p> <p>This copy of QGIS writes debugging output.</p> <p>The most common crash I now see is a crash when switching layers. When I change between two layers I am editing. If I do not change the editing tool (e.g. for vector layers, Adds Feature, Move Feature or Node Tool) then as soon as I click into the newly selected layer the application crashes.</p> <p>Dump files from the two most recent crashes at</p> <p>https://skydrive.live.com/?cid=2EEF0993EDE37686&#38;id=2EEF0993EDE37686!205#cid=2EEF0993EDE37686&#38;id=2EEF0993EDE37686%213794</p>

- Status changed from Open to Feedback

I cannot confirm on qgis 2.0(.1) on Windows and Linux, please update and report back, eventually attaching a sample project and data. Try also disabling all your 3rd part plugins.

- Status changed from Feedback to Closed

Closing due to lack of feedback.

Please reopen (with added details) if this still is an issue.
