<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 17379
<b>Description</b>  My Oracle connection doesn't work - for whatever reason whenever I try and "Connect" I get "ORA-12514 - TNS listener does not currently know of the service requested in the connect descriptor."  But that's not the bug.  Two things: a) When I press "Connect" I get that error instantly along with the opportunity to enter my Username and password again. As the error isn't "invalid username/password" or similar, why is QGIS asking for my credentials again? It would be better if it was a dialog that just had the error and an "Ok" option. b) If I press "cancel" on that error, the same error dialog appears ago. Looking at the Oracle log messages I see that it actually does try and connect again, despite my having pressed "cancel".
