QGIS Application - Bug report #8649
bad metadata in the debian repository

2013-09-23 07:36 AM - Ludovic Delauné

Status:	Closed			
Priority:	High			
Assignee:				
Category:	Browser			
Affected QGIS version:	2.0.1		**Regression?:**	No
Operating System:	Linux		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	fixed
Crashes QGIS or corrupts data:			**Copied to github as #:**	17380

Description

The package repository comes with an outdated configuration file for debian wheezy.
It's therefore impossible to install QGIS 2.0.1 on Wheezy without the "apt-pinning" trick.

The file http://qgis.org/debian/dists/wheezy/Release has a bad suite tag: ~~**suite: testing**~~ should be **suite: stable**
since Debian stable is 'Wheezy' and no longer 'Squeeze'

- Resolution set to invalid

- Status changed from Feedback to Closed

#4 - 2013-09-25 12:55 AM - Ludovic Delauné

resolution: invalid?

please note that you've changed the repo with the correct files now, which has fixed the problem for wheezy.

#5 - 2013-09-25 01:06 AM - Jürgen Fischer

- Resolution changed from invalid to fixed
