

QGIS Application - Feature request #8666

Use SID to connect to Oracle

2013-09-25 03:52 AM - Jonathan Moules

Status:	Open	Resolution: Copied to github as #: 17395
Priority:	Normal	
Assignee:		
Category:	Data Provider/Oracle	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>Currently (2.0.1) to connect to Oracle you need to know the Host details (IP and port). This is redundant because it is stored in TNS-names.</p> <p>In theory all that is required is either SID or SERVICE_NAME/GLOBAL_NAME which can then lookup the details. FME does it this way and it works well, maybe QGIS can do it too.</p>

Did you set the TNS_ADMIN environment variable to the directory where your tnsnames.ora is?

#2 - 2013-09-25 06:09 AM - Jonathan Moules

My mistake - this is already in there and no TNS_ADMIN is needed. It's not "SID" that is used, it's SERVICE_NAME. Apologies for my confusion.

If I just fill in the "database" as SERVICE_NAME/GLOBAL_NAME, and leave host blank, then it works fine.

So my feature request changes:

- Can the help and/or dialog be updated to reflect this? The current dialog implies that Host is mandatory in all situations. Just entering the database name is much easier.

Good morning,

I have a problem with the connection to the spatial data with oracle. When I go to test the connection oracle gives me this error: ORA-12705 Can not access NLS data files or invalid environment specified. Unable to connect. If I run the same connection with SQL Navigator everything is working perfectly. You need to set some specific parameter in QGIS? thanks

#4 - 2014-02-10 04:15 AM - Jonathan Moules

Hi Carlo, I don't think that's the same issue. You might want to ask on the QGIS mailing list - <http://www.qgis.org/en/site/forusers/support.html#mailing-lists>
