<b>Description</b>	
<p>(Possibly related to #8423 - but looks like it's not so a new issue)</p> <p>Windows 7 - QGIS 2.0.1</p> <ul style="list-style-type: none"><li>- Open the processing panel</li><li>- Drag panel so it is no longer docked with QGIS</li><li>- Release panel so it is floating.</li><li>- Now try to re-dock it.</li></ul> <p>While it <b>will</b> re-dock if the panel is in the right place, the grey bit doesn't pop out to show that you are currently in a "dockable" position. This seems to be intermittent and can apply to other panels too.</p> <hr/> <p>The "this is a dockable place" bit does always show up when you initially toggle floating from docking. I.e. this way it always works:</p> <ul style="list-style-type: none"><li>- Panel is docked.</li><li>- Drag panel away from dock. Keep dragging - new dockable locations will appear correctly.</li></ul> <p>Hope that's clear.</p>
