Crashes QGIS or corrupts data:	No	**Copied to github as #:**	17452

Description

QgsRasterTerrainAnalysisPlugin gives to QgsRelief layer URI as inputFile, QgsRelief simply opens it as GDAL file and it fails in case of WCS.
QgsRasterTerrainAnalysisPlugin does not check QgsRelief::processRaster() returned value and probably tries to add result as new layer, which fails and gives an error message.
