Description

When saving as shapefile a postgis layer, we get:

/qgis-0.9~svn20071216/src/core/qgsvectorfilewriter.cpp:176: OGRGeometry*

[[QgsVectorFileWriter]]::createEmptyGeometry(QGis::WKBTYPE): Asserzione @0 && "invalid WKB type"' fallita.

and qgis crashes.

This happens when some record does not have a geometry.

What is the expected behaviour? Ignore records without geometry?
