

QGIS Application - Feature request #8766

Atlas current feature filter

2013-10-04 01:30 AM - David McDermott

Category:	Map Composer/Printing	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>Good morning to the QGIS community,</p> <p>First off, thank you for QGIS 2.0.1, its a great piece of software and the GUI is fantastic. I have been looking forward to the atlas integration for a long time but I don't think it's quite there yet. When I print map books, I often have features close together. What I would like Atlas to do is apply a filter so that only the current feature is visible (or all features <i>expect</i> the current is visible). What I envisage is a feature similar to ESRIs data driven pages, page definition queries (http://tinyurl.com/p5ptq28).</p> <p>I posted this request in the User Forum (http://tinyurl.com/puvazlh) but Vincent Picavet suggested I post it here. I'm not sure if this is already possible. I have tried several iteration in the feature filter dialog such as \$feature=\$feature or \$rownum=\$rownum with no success. The expression \$feature=\$currentfeature (if there was a \$currentfeature) might work. On a layer by layer basis, a tick box in the layer filter option called "atlas filtering" might also be an option.</p> <p>Thanks,</p> <p>David</p>		

Associated revisions

Revision bff6fe59 - 2013-11-07 12:09 PM - Nathan Woodrow

Set currentfeature expression variable for Atlas printing. Fix #8766

History

#1 - 2013-10-04 04:30 AM - Giovanni Manghi

- Target version set to Future Release - Nice to have
- Category set to Map Composer/Printing

#2 - 2013-11-07 03:11 AM - Anonymous

- Status changed from Open to Closed

Fixed in changeset commit:"bff6fe5913f2666b5d90cea47ae062b429604a22".

#3 - 2013-11-07 03:14 AM - Nathan Woodrow

- File output_1.jpg added
- Resolution set to fixed/implemented

Now that we have \$currentfeature we can match that in a rule to highlight the active Atlas feature.

Hi, I was about to ask the same feature! So great.. The idea was to be able to filter labeling only in currentfeature with a intersect clause. Having another feature simplified on the current scale (with new simplification improvement by A.Huarte and V.Mora) would avoid performances issues with big polygons.. My two cents.
Régis

Regis,

You could do this in using a CASE in a label expression (for now)

```
CASE
WHEN $id = $currentfeature THEN "yourlabel"
END
```

<http://i.imgur.com/xEzgcF0.png>

You could even use a case statement in the transparency property to get something like this.

```
CASE
WHEN $id != $currentfeature THEN 50
END
```

Hi Nathan,
that works only for Atlas coverage layer right ?

#8 - 2013-11-11 03:49 AM - David McDermott

Thank you Nathan, this is perfect. How do I go about implementing this fix? I downloaded and installed the most recent (10/11/13) version of QGIS but there is no \$Currentfeature function.

#9 - 2013-11-11 03:56 AM - Nathan Woodrow

Have you enabled Atlas in the composer. It will only be active then.

#10 - 2013-11-11 04:20 AM - David McDermott

- File *atlas_on.png* added
- File *atlas_exp.png* added

Atlas composer is active, and I have the \$feature function. I took your idea and put (\$feature + 1) = \$id in the style expression and it works. I have added a few photos.

#11 - 2013-11-11 04:24 AM - Nathan Woodrow

I wouldn't use \$feature + 1 because \$feature is just a count and \$id is not ordered or can have missing numbers so this expression will fail.

Can you QGIS Code revision you have in your About dialog.

#12 - 2013-11-11 05:30 AM - David McDermott

- File *qgis_version.png* added

My \$feature+1 \$id was just a temporary workaround that worked on this dataset. The code version is ebebd3. Here is a screen shot

#13 - 2013-11-11 05:38 AM - Nathan Woodrow

Oh you're still running 2.0. You will have to grab a nightly build if you want this feature. You can get the nightly dev version using the OSGeo4W installers at <http://qgis.org/en/site/forusers/download.html>

#14 - 2013-11-18 05:22 AM - Regis Haubourg

Hi Nathan,
I can't see \$currentfeature variable in latest revision on OSGEO4W (5f5cd4c) , with Atlas enabled..
Any idea? OSGEO4W is late?

#15 - 2013-11-18 05:28 AM - Nathan Woodrow

Very old. Are you using the OSGeo4W of the qgis site?

#16 - 2013-11-18 05:41 AM - Regis Haubourg

Yep, updated osgeo4w 64 bit today. Will check 32 bit now...

#17 - 2013-11-18 05:43 AM - Regis Haubourg

Hum, in fact 32 bit package is really old, 64 bit is up to 2.1.0-60

#18 - 2013-11-18 07:04 AM - Jürgen Fischer

regis Haubourg wrote:

What do you mean? The packages both are from today.

#19 - 2013-11-18 07:36 AM - Regis Haubourg

In my 32 bit osgeo4w installer, I get 2.1.0-55 where I get -60 in 64 bits version.

Right, but that doesn't mean they contain different QGIS versions. Just that the 32bit version wasn't built successfully as many many times as the 64bit version.

#21 - 2013-11-18 08:29 AM - Regis Haubourg

Ok, didn't know that. Anyway, it seems nathan's code is not fonctionnal in 32 bit package. Maybe other reasons explain that.

#22 - 2013-11-18 12:58 PM - Nathan Woodrow

Can you paste a image of your about QGIS dialog.

#23 - 2013-11-19 12:56 AM - Regis Haubourg

here is what I see:
