Pull Request or Patch supplied:	No	**Resolution:**	
Easy fix?:	No	**Copied to github as #:**	17487

Description

It would be very interesting to be able to create different paths in Modeler, which would be followed by the decision of the user.

I send attached a concrete example. Imagine that you are requesting an input layer that can be found in different CRS, and you want the model run in a particular CRS. So, the user could be questioned if intends to perform the transformation. If the answer is yes, then the model runs Reproject layer; if the answer is no, then goes directly to the next module.

Could this be implemented? The Boolean input parameter made sense to me for this purpose.

Thanks!
