do you have write permissions in the output folder?

#2 - 2013-10-08 12:48 AM - Carlos Eduardo Hernandez

Yes. Results are the same when trying to save to the desktop. Results are the same when running QGIS in administrator mode. Furthermore, I am able to save other file types in the same directory with no problems at all. For example, I am able to save project files (.qgs).

weird, on Windows 7 there is no such issue.

#4 - 2013-10-16 08:06 AM - Joel Copeland

I'm using Windows7. I discovered this same issue using Lisboa, so I just upgraded to Dufour. Still can't seem to save a style file.

on other hand it works on both win 7 and win 8 in general, so I start to think this may depend on a local issue.

Same as #7936

Cannot save style from layer made from csv.

#7 - 2014-01-30 08:53 PM - ramon .

I've sporadically run into this before, but it's always gone away after I've shutdown and come back int the morning...

Almost always it's something on a shared/networked drive.

Does this fit with anyone else?

#8 - 2014-04-28 01:02 PM - Brian Syme

I'm seeing the same bug. Windows 8, saving to a local drive. The mouse pointer briefly changes to the Windows 8 "busy" blue circle but no file is saved.

does it happens only for CSV layers or any type of layer?

#12 - 2014-09-22 06:56 AM - Toni Keskitalo

For me, this happens with Windows 7 Professional and with CSV layers and any file location, local drive or network drive. The mouse pointer is the "working pointer" for a moment but nothing happens for QML style file. I can save style fine from eg. shapefile layers.

Additionally, trying to save as an SLD file gives an error "ERROR: Failed to created SLD style file as . Check file permissions and retry."

2.4.0-Chugiak (QGIS code revision 8fdd08a), installed from Osgeo4win (not to the default location, though).
