Description

I create a lot of maps in lat/lon and display the lat/lon tics and annotations on my maps. Using QGS v2.0.1 I like the new annotations in Degrees/Minutes. But the x/y intervals only allow 5 decimal places. So when I need to display to 5 minute intervals I need to enter 0.08333333334. To do this I was able to edit the *.qgs project file and change the value that I entered in Composer which was 0.08333 to 0.08333333334 and that worked. So it would be great if you could increase the number of decimals that can be entered to 12.

Also when displaying the annotations in Decimal Degrees it would be nice to have the degree symbol shown.

Regards,
Dan
